

config-global-core.editor

config --global core.editor

- Sometimes git needs a text editor (commit/merge)
- If you know home-row typing, learn vim (seriously. Use vimgtutor)
- Otherwise tell git how to use your text editor:

~/.gitconfig

```
[core]
  editor = /path/to/my/editor --args-needed-to-open-file
[mergetool "myeditor"]
  cmd = /path/to/my/editor --args-for-multiple-files \"$MERGED\" \"$LOCAL\" \"$BASE\" \"$REMOTE\"
  trustExitCode = false
[merge]
  tool = myeditor
```

Using the command line
