config

config

```
~/.gitconfig

[user]
  name = Maxwell Anselm
  email = manselm@lutron.com
```

```
> ssh-keygen
```

Give it a name like `id_rsa-bitbucket`, no password

Copy contents of `id_rsa-bitbucket.pub`

Add it to Bitbucket > Manage Account > SSH Keys

```
~/.ssh/config

Host bb
  User git
  HostName git.intra.lutron.com
  Port 7999
  IdentityFile ~/.ssh/id_rsa-bitbucket
```

Configure your prompt!
(non-Windows)
Google around for git prompts

```
> git clone bb:projname/reponame.git
```

config --global core.editor
